Security doors & safe rooms, *unseen.*

Safe rooms, internal & external security doors — hand-finished in timber, with the steel core and steel frame completely concealed.

HENLEYS

TESTED & ACCREDITED
LEVEL 1 · LEVEL 2 · LEVEL 4

Founded out of a desire to *help*.

We are a family run company founded in 2010 out of the desire to help people.

Steve, one of the founders of Henleys, lost his father — leaving his mother alone in a large home, scared and alone. She asked Steve to make her bedroom door secure so she could lock the door and feel safe when home alone.

After testing everything available on the market, Steve was not satisfied. Everything either looked aesthetically pleasing but was not secure enough to stop a determined intruder, or was very secure but unappealing and not suitable for a residential setting.

Steve and Jason — the original founders — set out to develop a high security door that looked beautiful enough to be installed into a residential home, yet could withstand a forced attack from intruders.

“We are the only UK manufacturer that specialises in UK tested and accredited bespoke security doors and safe rooms, manufactured bespoke for a residential setting.”

--- 02 INTRODUCTION

“It’s estimated that in the UK a homeowner is attacked by a violent burglar *every 30 minutes.*”

*Sources: Daily Mail and The Telegraph

WHO WE ARE

We are a UK based security door & safe room business providing services across the United Kingdom and worldwide.

We specialise in replicating your existing or desired door design so that your new security door blends into the rest of your home surroundings.

Our bespoke manufacturing service creates beautiful solutions for both the interior and exterior of your home, no matter the door design or size required.

All doors are manufactured with a concealed solid steel core and hung from a steel frame, all of which is concealed in the timber design of your choice.

THE NEED

With traditional home security systems easily bypassed — or in many cases completely ignored — and house alarms no longer attended by the police in many areas, there was a need for a better solution.

We’ve worked with many victims of burglary to help them feel safe again after a traumatic event, such as coming face-to-face with an aggressive and violent intruder in their home.

No one should have to experience this. Our goal is to help homeowners be proactive and take control of their home security — ensuring every family has the precious time needed to call for help, in safety.

RELIABILITY

We proudly passed stringent Secure By Design police testing in 2015, and our doors are still made to the exact, robust design they were back then.

Our doors have achieved Burglary Ratings STS 202 BR1, BR2, BR3 and BR4 (LPS 1175 [SR] alternative), tested by Element Testing House — one of the world’s leading providers of testing, calibration and advisory services.

With strict adherence to rigorous safety and testing standards and solid accreditation, Henleys is the natural choice for reliable physical security.

THE PROBLEM

Without a Henleys security door.

Exposed

Traditional methods of home security can be easily bypassed, even by unskilled intruders.

Vulnerable

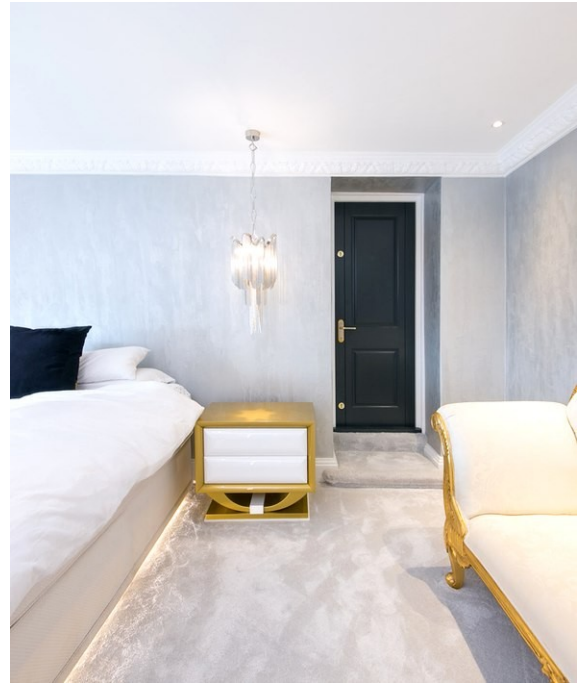

We are all at our most vulnerable while we are asleep, as we are unable to defend ourselves & our possessions.

Alone

In many areas, house alarms are no longer attended by the police, as they are low priority emergencies.

THE SOLUTION

With a Henleys security door.

Secure

The intruder will not come face to face with you or your family if they gain access to your home.

Strong

Steel core doors and 42mm deadbolt locking mechanisms can withstand attacks from heavy weapons and tools.

Safe

You buy yourself valuable time to call for help or assistance, in safety.

Three levels of *protection*.

Our products can be manufactured to meet three tested levels of protection.

LEVEL 1

Delay & retreat

For security door solutions that delay intruders for a matter of minutes and allow clients to retreat to more secure areas of the home.

Against basic hand held tools and body weight.

2-5

MINUTES
APPROXIMATE
PROTECTION

LEVEL 2

Stop the determined intruder

Stops determined intruders armed with hand held, everyday tools who have some knowledge of the home, family and layout of the property.

Level 2 can also seriously delay professional intruders using larger tools.

Against hammers, crowbars, wedges, chisels and screwdrivers.

15

MINUTES
CONSTANT
ATTACK

LEVEL 4

Stop the professional

Stops professional, aggressive intruders who arrive equipped with large tools and have a vast knowledge of the property layout from gaining access to the client.

Against hooligan bars, axes, grinders and sledgehammers.

30

MINUTES
CONSTANT
ATTACK

What we create.

DOORS

- High security internal doors

--- DOOR FEATURES

Look inside a Henleys door.

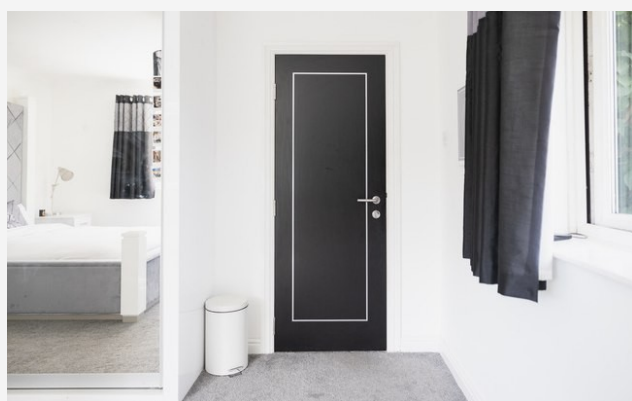

A sectional view shows why our doors are so special:

- All manufactured right here in the UK
 - Anti drill, anti snap, anti bump 3 star security door barrels
 - Bespoke match service, timber finished
 - Hidden internal steel core layer — no steel on show
 - Security mounted hinges with security bolts
 - Reinforced concealed steel door frame
 - Up to 12 point locking system
 - Tested up to BR4 rated burglary resistance
 - Bullet proof options available
-

Internal security doors.

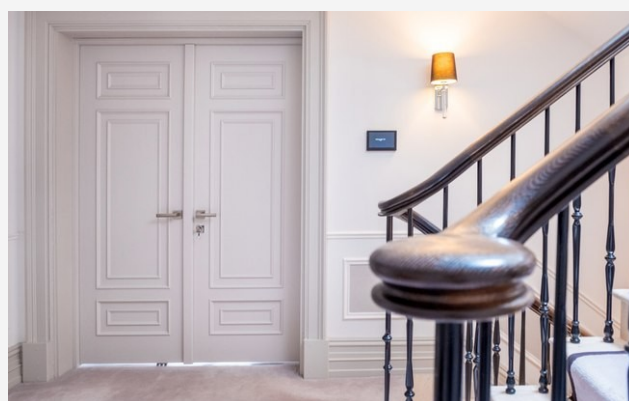

*No steel
on show*

All manufactured with a full steel core and a full steel frame, and concealed in a bespoke timber finish to leave no steel on show. The steel core houses our high security deadbolt locking mechanism which, when engaged, locks into the full steel frame ensuring maximum strength. Every door is made to measure and to each of our individual clients' requirements.

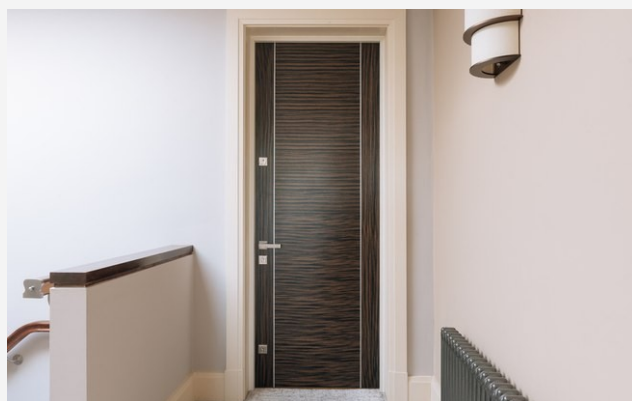

American Oak Security Door

STS 202 BR2 Level 2 Viking Security Door · American oak stained black finish · Bespoke match service, replicating other standard doors within the home · Bedroom security door

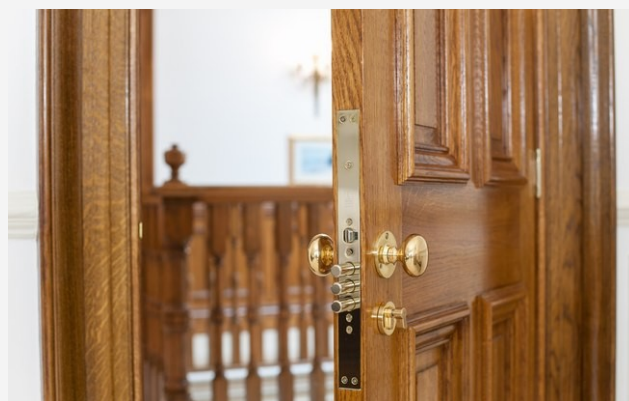

Double Master Suite Doors

Double doors sectioning off the entire master suite to create a safe retreat area · Locking into the head of the door and the floor · Bespoke match service

Wenge Security Door

STS 202 BR4 Level 4 Spartan safe room door · Single internal bedroom security door · Cross grain wenge design · Polished chrome hardware · Remote property requiring increased security

Hardwood Security Door

Single high security internal door · Bespoke solid oak design · 4 panel raised and fielded with bespoke handmade bolelection mouldings · Polished brass hardware · English Heritage estate in the countryside

External security doors.

No steel
on show

All manufactured with a full steel core and a full steel frame, and concealed in a bespoke timber finish to leave no steel on show. The steel core houses our high security deadbolt locking mechanism which, when engaged, locks into the full steel frame ensuring maximum strength. Every door is made to measure and to each of our individual clients' requirements.

10 Downing St Door Design

Arched glazed security top light · High gloss 10 Downing Street door finish · 6 bolt lock system · Polished chrome hardware with handmade Swarovski lever on rose

Front Entrance Security Door

Internal colour inspired by the 'Friends' TV show · Dual finish · Bespoke decorative hardware · London terraced townhouse

Traditional Entrance Door

Matt black hardware · High security deadbolt locking mechanism with a 42mm throw · Bespoke stain and lacquered finish to match the previous front door

High Security Glazed Doorset

Anti-bandit security glass that can withstand 20 hammer/axe blows · Double door combination · Polished chrome hardware · Beautiful family home

Ballistic mitigation.

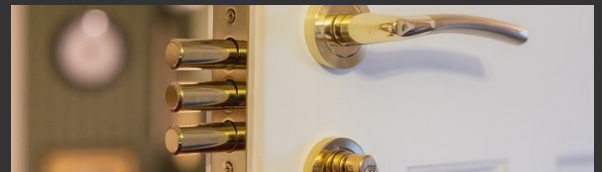

Every Henleys internal and external security door — and every Henleys safe room — can be upgraded to include ballistic mitigation.

NJ IIIa ballistic mitigation panelling can be fitted throughout the whole door and frame, protecting against a 9mm handgun, .357 & .44 Magnum. Increased protection is available on request.

Our safe rooms can have this upgrade too, with ballistic panels added to the walls, floor, ceiling, door and frame.

These doors are designed to be discreet and blend into your current home surroundings, with no steel or ballistic panelling on show anywhere on the door or the frame.

The ballistic panelling is lightweight — the door's weight increases only slightly — and measures around 2–3mm in thickness, so overall door thickness increases only slightly too.

KEY BENEFITS & FEATURES

PEACE OF MIND

Knowing you will not come face to face with a potentially violent intruder.

SIMPLE YET EFFECTIVE

Protects against 9mm handgun, .357 & .44 Magnum.

SLEEP SOUNDLY

Knowing you and your family are safe behind our doors.

BESPOKE DESIGNS

Manufactured bespoke — we can replicate your existing doors.

DISCREET

Hidden within the core of the door and frame.

EASY PROCESS

Send us your floor plans and we'll recommend the best positions.

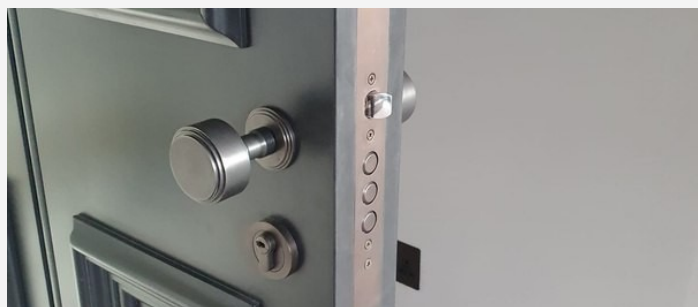

Automatic *closing & locking.*

All of our internal and external security doors can be upgraded to be automatic.

Using the features below, doors can automatically shut and lock, securing areas of the home remotely whenever deemed necessary.

They can be manufactured completely bespoke to match your existing door designs throughout the property, so our high security doors do not stand out at all.

Positioned throughout the home, in an emergency they can be remotely locked to shut off certain areas and keep the family safe.

OPERATION — CONTROL OPTIONS

- When the alarm is triggered
- Dedicated panic button
- Dedicated app
- Upon setting the alarm
- Fingerprint
- Key code
- Fob access

SIMPLE YET EFFECTIVE

Discreet, blending into the home seamlessly.

PEACE OF MIND

No face-to-face contact with an intruder.

EASY TO USE

Doors can shut and lock simultaneously.

ACCESS CONTROL

Control who has access, and when.

Sectional security.

Why consider sectional security?

Sectional security creates safe areas for you and your family. Using several doors, it can effectively seal an intruder into one area of your home — stopping you from coming face to face with them and preventing further damage or theft.

In the diagram above, we have recommended changing the doors around the downstairs hallway (green) to our timber finished, steel reinforced security doors. If an intruder gains access through an easy access point (red) — such as a window or the front door — they will come up against a Henleys high security door, stopping them from moving further through the house and reaching the homeowners upstairs.

PEACE OF MIND

Knowing you will not come face to face with a potentially violent intruder.

SLEEP SOUNDLY

A peaceful night's sleep, knowing your family are safe.

SIMPLE YET EFFECTIVE

Sealing an intruder in one area, stopping access to the rest of the home.

BESPOKE DESIGNS

Manufactured bespoke — we can replicate your existing doors.

DISCREET

Guests in your home will not know you have security doors installed.

EASY PROCESS

Send us the floor plans and we'll recommend the best positions.

Safe rooms, *discreetly* done.

No steel
on show

Henleys specialise in bespoke, discreet safe room protection. We convert bedrooms, en-suites, bathrooms and wardrobes into safe areas to keep you secure should an intruder enter your home. Often called panic rooms, they give you and your loved ones a safe place to retreat to until help arrives — in new-build projects, or by converting any existing room in your home.

SAFE ROOMS EXPLAINED

For most safe rooms there are three main areas of security:

- Walls, floor and ceiling
- Doors and windows
- Alarms and camera systems

We offer three protection levels to choose from, to suit your individual requirements.

I Medium protection

We reinforce walling with structural stud work at specific spacings, install tested steel works and finish with ply board then plasterboard, ready to be decorated. Designed to protect against intruders with basic tools.

II High protection

We add Henleys Level 4 walling to walls, floors and ceilings — protecting against hooligan bars, axes, grinders and sledgehammers. Designed for intruders who have pre-planned an attack to obtain valuables or reach a specific person.

III Bullet resistant

Bullet resistant (BR) panels added to walls, floors, doors and ceilings, protecting against a range of firearms — from 9mm handguns through to .357 & .44 Magnum and shotgun. Increased protection available on request. Lightweight and heavyweight versions available.

Mock sash *box windows.*

Our mock sash box windows are designed and manufactured to replicate a traditional sash box window, and can include a range of security glass — from anti-bandit security glass to hammer resistant and ballistic rated glass.

Thanks to our meticulous eye, these windows look exactly like a traditional sash box window, meaning they will be accepted by planning — allowing you to replace the windows in your clients' homes.

Secondary *glazed windows.*

Secondary glazing is an extremely effective and efficient way of improving home security: a fully independent internal window, installed on the room side of your existing primary window.

- An additional layer of security to your home
- Extremely robust frames that close firmly with three locking points
- Glass from anti-bandit security glass up to hammer resistant and ballistic mitigation
- Lowers the risk of forced entry and aggravated burglary
- A cost effective, hassle free way to improve your home security

Before & after.

Our Bespoke Match Service is unique. We can match any style and design of door, so your security door looks exactly the same as your current doors.

In our clients' words.

“

From meeting and arranging our new doors, Henleys promised a great service but delivered much, much more. Meticulous surveying, friendly and professional admin, copy and production of the existing doors superb, passionate, committed installation team — a pleasure to have in your home. If Henleys start a fan club we will be founding members, so will you if you engage with this wonderful company.

HOUSE MANAGER FOR A UHNW FAMILY

“

I became a widow three years ago and found that being in the house on my own at night was very stressful and caused me to have many sleepless nights. The thought of someone breaking into my home while asleep scared me so much. I then heard of Henleys Security Doors and decided to have one of their doors fitted on my bedroom. I must say it is amazing, as I can now lock it with the knowledge that I am perfectly safe...

VULNERABLE HOMEOWNER

“

Very pleased with the quality & installation of the door. We now feel secure & sleep well. Jason and Steve were very thorough from start to finish and went the extra mile to take our wishes into account. I would recommend Henleys to anybody who wants peace of mind for themselves and their family.

BREAK-IN VICTIM

“

The security door installed by Henleys has provided peace of mind knowing that my family are safe, as I am away from home often due to work commitments. I am extremely pleased how Henleys were able to replicate my old door. I am very impressed with the strength and quality of the door, and that I now also have a secure room to keep my valuables safe. Henleys are a friendly company to deal with and I am happy to recommend them.

HOMEOWNER IN RURAL SCOTLAND

Previous *installations.*

SECTIONAL SECURITY, FAMILY HOME, SURREY

Unfortunately, this client had a live threat to their family, so took advantage of our high security doors to create sectional security throughout their home. Wherever an intruder entered on the ground floor, they would come up against a security door, stopping them from gaining access upstairs to the family.

HOMEOWNERS, OXFORD

These clients wanted a perfect match to their original, unique front door. They didn't think we could — but we did. This external Level 2 security door replica was manufactured & installed within 10 weeks, and our clients were over the moon with the finished product.

DOUBLE HIGH SECURITY DOORS WITH HIGH SECURITY GLAZING

This client had two sets of double Level 2 security doors in their property — one set with P6B security glass, the other solid security doors. Both were designed and installed to be in keeping with the rest of their home.

FREQUENT TRAVELLERS, KENT

These clients wanted a statement front door to show off their impressive home — and we delivered. This high security entrance door is the perfect wow factor for our clients' stunning home, all whilst keeping them safe from aggravated intruders.

We are proud of every single door we fit, and deliver only the highest quality with every job we complete. We hope these examples show how unique each of our products and services are — and allow you to place your confidence in Henleys.

Your questions, *answered.*

What makes a Henleys door so strong?

The unique hidden steel core and steel frame, in which the high security lock is held.

Can people tell by looking that it is a security door?

No. Once your Henleys security door is installed there will be no steel showing, and the door will blend into your home like a normal timber door.

What is the purpose of a Henleys security bedroom door?

A Henleys door can protect you and your family from intruders if they enter your home. It can be locked very quickly in an emergency, keeping you safe behind the door. You can also lock it from the outside to keep your valuables safe when you are away.

Why is a bedroom security door an essential measure?

Most of our clients have been subject to an aggravated burglary, or fear being subject to such an attack, and want to protect themselves and/or their possessions. Whilst double glazed windows and timber doors make you feel safe, they are not very effective in stopping a determined intruder. With a Henleys security bedroom door installed, you will be safe until help arrives.

What are Henleys modern safe rooms or safe bedrooms?

Henleys security doors and safe room walls turn existing rooms into modern, discreet safe rooms, complemented with modern alarms and phone technology. In a burglary, your bedroom security doors and walls allow enough time to call for help and wait for the authorities. Once installed, it blends seamlessly with your interior, concealing your safe room.

What door sizes are available?

Every door is manufactured bespoke, so we can cater to any door size.

Is a Henleys door harder to break into than composite or uPVC?

Yes. Composite and uPVC doors are generally tested to a residential standard called PAS 24 — a low standard of testing, usually using screwdrivers and chisels. Henleys Security Doors are tested to commercial standards, which are much tougher and use tools such as crowbars, hammers and axes.

What door styles are available?

Every door is bespoke, so we can manufacture almost any design — and we can replicate your current doors if required.

Can I fit the door myself?

Yes, if you are a carpenter or have a good knowledge of installing solid timber doors.

How heavy is the door?

Our doors start at approximately 70kg depending on the timber type; once installed, the weight is not too dissimilar to a hardwood entrance door.

How long does it take for my door to arrive?

Generally 4–10 weeks from the date of order, depending on the specification required. Once completed, we are generally in your home for a day per door for installation.

Please do not hesitate to contact us for a discussion if you have any further questions.
